

Financial Management of the Future — Editor Packet

Tradewinds demo video · visual cut + voiceover assembly · 4:41 (281 s) · 1920×1080 · silent

You have a **finished visual cut of the 14 product shots**, recorded live from the app at true 1080p, already placed on the storyboard timeline. Your job: **lay Sean's voiceover against it** (it syncs shot-for-shot) and **create + drop in the 6 shots that don't exist yet** (Joe on camera, b-roll, and the motion graphics). Everything you need to know is below.

1 · What's in the package

- **FM-Future_live-product_1080p_silent.mp4** — **USE THIS** the cut to work from. Real app footage; 14 product shots in place, 6 placeholder slates to replace.
- **FM-Future_VO-sync-master_1080p_silent.mp4** — backup (crisp app stills instead of motion); identical timeline.
- Sean's voiceover track — the storyboard script, ~4:41 (delivered separately).
- This packet + the source storyboard (docs/video-draft-shotlist.md) for full per-shot capture notes.

2 · How to assemble (3 steps)

1. Drop **FM-Future_live-product_1080p_silent.mp4** on the timeline at 00:00. It is 16:9, 1080p, 30 fps, **no audio**.
2. Lay Sean's **voiceover** on the audio track starting at 00:00. Every shot already fills its exact storyboard window, so the narration lands on the right picture with no trimming. Use the alignment table below to confirm each line sits on its shot.
3. Replace each of the **6 navy "INSERT ..." slates** with the real footage (Section 4). Match the slate's duration so the timeline — and the VO sync — stay intact.

No on-screen captions or lower-thirds are baked in; product UI text is already in the footage. Don't re-key it.

3 · Shot & voiceover alignment

LIVE = finished app footage in the cut · **CREATE** = placeholder slate you replace. Timecodes are cumulative from 0:00.

#	IN-OUT	DUR	SOURCE	ON SCREEN	VOICEOVER LINE IT ALIGNS TO
1	0:00-0:08	8s	CREATE	Joe to camera, neutral bg, GH lower-third	"We're Guidehouse... one of the hardest problems in federal financial management."
2	0:08-0:28	20s	CREATE	Desaturated b-roll: paper stacks, inboxes, "auditor request"	"Audit readiness is broken... requests bounce between inboxes for weeks."
3	0:28-0:46	18s	CREATE	Cost icons → grid of agencies → lift into brand palette	"The cost shows up everywhere... the problem we built FM of the Future to solve."

#	IN-OUT	DUR	SOURCE	ON SCREEN	VOICEOVER LINE IT ALIGNS TO
4	0:46-1:01	15s	LIVE	Overview hero "Audit-ready, every day" + one-product header	"...a single product Guidehouse already runs in production — two capabilities, same records."
5	1:01-1:15	14s	LIVE	Pipeline diagram: TX-1000043 travels Reconcile→Package→Deliver	"...one connected workflow: continuously reconciled... already defensible and ready to hand over."
6	1:15-1:29	14s	LIVE	"Reconciliation, on autopilot" title card	"First, Agentic Reconciliation — where most audit programs lose time..."
7	1:29-1:42	13s	LIVE	Source datasets (PO/GR/GL); job runs; reconciled result	"We point Agentic Recon at two or more source datasets... match, surface mismatches, explain why."
8	1:42-1:55	13s	LIVE	"Review queue — exceptions only"; first rationale card expanded	"Every mismatch comes with the agent's rationale — review exceptions, not entire ledgers."
9	1:55-2:07	12s	LIVE	Audit-ready output card + TX-1000043 handoff + "Send to PBC"	"...a clean, reconciled record set — defensible, ready the moment an auditor asks."
10	2:07-2:19	12s	LIVE	PBC title + "From Reconciliation" banner (same TX)	"Next, the PBC Request Agent — turns that reconciled data into an auditor-ready package..."
11	2:19-2:31	12s	LIVE	Request submitted; "Interpreted & routed · TX-1000043"	"Here's the PBC Request Agent in action — an operator submits a request for a supporting record."
12	2:31-2:47	16s	LIVE	Provenance trail + retrieved-source cards (PO/GR/GL)	"The agent reasons across source systems, retrieves the artifacts, assembles a response — provenance on every line."
13	2:47-3:03	16s	LIVE	Auditor-ready package: "~3 days → Delivered in minutes", SFA chip	"What used to take 3 days is delivered in minutes — defensible, repeatable, accelerating the mission."
14	3:03-3:13	10s	LIVE	Lineage chain: Reconciliation → PBC → package; auditor outside	"...one product, one pipeline — the same record, never leaving the product."
15	3:13-3:29	16s	LIVE	"In production today" missions strip (OSW, Army, ATC)	"...in production today across federal missions — OSW Comptroller, the Army, Army Transportation Command..."
16	3:29-3:47	18s	LIVE	"Built on accredited building blocks" strip	"...orchestrating accredited building blocks — Databricks... human-in-the-loop guardrails on every output."
17	3:47-4:05	18s	CREATE	TRL / SBIR Phase III badge motif (motion graphic)	"...a subscription product at Technology Readiness Level [TRL X]... eligible for SBIR Phase III direct award..."
18	4:05-4:20	15s	LIVE	"Offered as a subscription" strip (no rates shown)	"...sold as a subscription, scoped to your data and audit workload... a quote that fits."

#	IN-OUT	DUR	SOURCE	ON SCREEN	VOICEOVER LINE IT ALIGNS TO
19	4:20–4:34	14s	CREATE	CTA card: contact + CDAO Tradewinds Silver Aisle link / QR	"Find FM of the Future on the CDAO Tradewinds Silver Aisle..."
20	4:34–4:41	7s	CREATE	Guidehouse logo lockup, fade to black	"Guidehouse — mission-ready innovation, audit-ready every day."

4 · What still needs to be created (6 shots)

These render as navy "INSERT ..." placeholder slates in the cut. Build each to the duration shown and drop it into its window.

Shot 1 · 8s · on-camera. Joe to camera, neutral background, Guidehouse lower-third. **Need: filmed footage.**

Shot 2 · 20s · b-roll. Desaturated montage — paper stacks, scrolling sheets, inbox counter spiking, an "auditor request" badge. **Need: b-roll footage.**

Shot 3 · 18s · motion graphic. Three cost icons → widen to a grid of agencies → lift from desaturated into brand palette. **Need: mograph.**

Shot 17 · 18s · motion graphic. SBIR topic → Phase III badge → "sole-source eligible"; stopwatch · shield · scale icons. **Need: mograph AND the real TRL number (script says [TRL X]).**

Shot 19 · 14s · motion graphic. CTA card — contact + Tradewinds Silver Aisle link/QR. **Need: mograph AND the confirmed Silver-Aisle URL + QR.**

Shot 20 · 7s · motion graphic. Final Guidehouse logo lockup on brand background, fade to black (optional audio sting). **Need: end-card asset.**

Two decisions to lock before final render: (1) the real **TRL number** for Shot 17 (currently a placeholder), and (2) the confirmed **Tradewinds Silver Aisle contact + QR** for Shot 19.

5 · Specs & notes

- **Deliverable:** 16:9, 1920×1080, 30 fps, **no audio track** (VO is separate). Total 4:41 (281 s).
- **Sync:** every product shot is cut to its storyboard duration, so the VO aligns by simply starting both at 00:00. Keep replacements the same length as their slates.
- **One record threads the whole demo:** TX-1000043 / VENDOR-035 / \$14,026.62 — it is real on screen, not staged.
- **If you want higher-polish product shots** (e.g. featuring the live progress-bar / card-reveal micro-animations): the app is recordable at `localhost:5180` (`npm run dev`) — see §C of `docs/video-draft-shotlist.md` for the exact capture steps. The current cut rests on the settled states the narration sits on.

Source of truth for script + durations: `docs/fm-future-storyboard.xlsx` and `docs/video-draft-shotlist.md` . Reference stills for every product state: `docs/video-frames/` .
