

Color Palette

Our color story is bold and bright. Used in conjunction with our complete design system, our brand look and feel evokes energy and optimism.

Core Colors

Primary Colors

The Guidehouse Core Colors are organized into two corresponding sets. Our primary colors are derived from the colors of the Guidehouse Logo, while our secondary colors consist of complementary shades of blue that work well with our primary colors. These primary colors take up the largest portion of your design. They serve as the foundation and set the overall tone. Think of them as the primary hues that dominate the visual space.

**Green+**

CMYK 0, 0, 0, 0
PMS

Secondary Colors

The secondary blue colors in our palette complement the dominant ones. They add variety and help our designs feel like the Guidehouse brand. Use them for elements like backgrounds, subheadings, or supporting graphics.

Color Ratio

The diagram below demonstrates the appropriate color usage ratio. It is always

The diagram below demonstrates the appropriate color usage ratio. It is always preferable to lead with white or black (e.g., on our website home page, brochure cover, or presentation cover slide), while looking for opportunities to use our Guidehouse Greens, and secondary colors to draw the eye and highlight key elements. The 60-30-10 rule is a valuable guideline for choosing and pairing colors. Here's how it works:

- **Dominant Colors (60%):** These colors take up the largest portion of your design. They serve as the foundation and set the overall tone. Think of them as the primary hues that dominate the visual space.
- **Secondary Colors (30%):** The secondary blue colors in our palette complement the dominant ones. They add variety and help our designs feel like the Guidehouse brand. Use them for elements like backgrounds, subheadings, or supporting graphics.

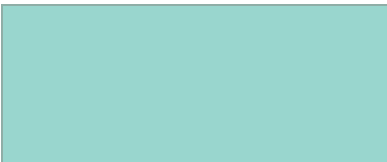

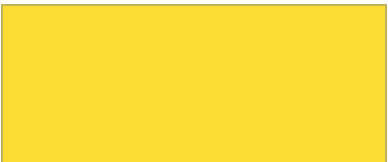

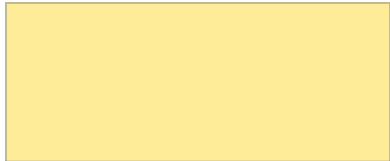

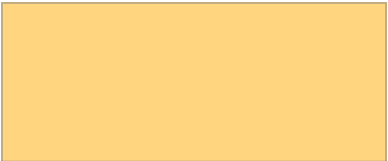

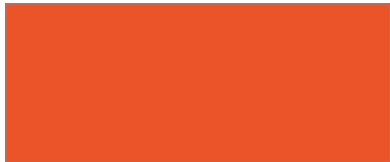

Extended Palette

The following colors are for data visualization and data graphics only

For figures, first start with the core colors, beginning with the primary colors (with the exception of Green+). Once Primary Palette colors have been used, add accent colors from the Extended Data Palette as needed

Data Palette

The extended palette colors are to be used for data visualization and data graphics only. For figures, first start with the core colors, beginning with the primary colors (with the exception of Green+). Once Primary Palette colors have been used, add accent colors from the Extended Data Palette as needed. Accent Colors (10%): The accent colors are the smallest portion of the palette and the most flexible.

Data Palette in Use

When designing around data, it is important to lean on the Guidehouse Core Colors as much as possible. We always want our data to convey the Guidehouse brand at the same time that it accurately depicts our data and information.

NOTE

Do not use Green+ in any data charts or graphs.

Guidehouse Gradients

Guidehouse has two approved gradients for use. Both are linear gradients, and the mix can be used at an angle or straight.

These gradients work best in large amounts as background, but can also be used in smaller doses especially well in illustration work.

Green+ to Guidehouse GreenLagoon to Black

Gradient Do's

**Do**

Use gradients as flood backgrounds for report covers, social media, heroes, etc.

**Do**

Use gradients minimally to accent designs or highlight key messages.

**Do**

Use gradients in social cards.

Gradient Don'ts

While gradients can be compelling when used properly, it is especially important to adhere to our gradient rules for do's and don'ts, because incorrect usage can easily

stray off brand.

✖ Don't

Don't use radial gradients; use a linear style only.

Don't use gradients over images or color fields.

Don't apply gradients under text that reduces the contrast ratio or readability of the text.

✖ Don't

Don't use too many gradients together.

 Don't

Don't make your own gradients or introduce different colors.

 Do

 Don't

Don't use as a transition

Use large blocks of color behind text to increase legibility.
